

UNIQUE WINDING ARM FOR ULTRALINE

Many winch handles are heavy and prolonged, creating an obstacle on deck. In contrast, the ULTRALINE Unique Winding Arm is slimline and robust and does not restrict deck space, enabling the handle to remain attached to the ULTRALINE Reels.

The additional features of the Unique Winding Arm include deck filler keys and shackle keys for convenient use when on deck.

Round handle knob for easy grip and to avoid harsh contact if the winch handle is spinning fast.

The concave surface makes it easy to grab with the user's hands.

Non-projecting short round handle knob made from Delrin.

Brazen bearing enables smooth rotation, whether lubricated or not.

Angled arm body to avoid contact with reel surface.

STANDARD WINCH HANDLE PROFILE
